Comptroller General of the United States (n.d.) states that the "gmt" field in the header of a CSV file is used to specify the time zone of the data. The field is optional, but if it is present, it should be followed by a colon and the time zone name. For example, "gmt:EST" indicates that the data is in Eastern Standard Time. The field can also be used to specify a time zone offset, such as "gmt:-0500" for Eastern Standard Time. The field can also be used to specify a time zone name and an offset, such as "gmt:EST-0500".
